Environmental Policy

Peace Dining Corporation (PDC) believes that business is responsible for achieving good environmental practices and operating in a sustainable manner. We are therefore committed to minimizing our overall environmental impact by continuously improving our environmental performance. PDC seeks to identify, measure, and understand the direct and indirect environmental impact of its operations and mitigate those impacts. We entirely support and comply with the requirements of current environmental laws and regulations. We are committed to monitoring progress and reviewing performance annually to achieve the target. It is our priority to encourage our employees, customers, and suppliers for sustainable living. Our detailed environmental policies are as follows:

Sustainable Sourcing: Purchase all seafood based on Monterey Bay Aquarium (MBA) seafood watch green or yellow ranking or other third party certifications such as Marine Stewardship Council (MSC) and Aquaculture Stewardship Council (ASC). Regularly examine the sustainability of the product and phase out unsustainable products. Encourage our suppliers to provide sustainable products and reduce the environmental impacts of their operations by communicating our policy.

Energy conservation: Increase energy efficiency in our company facilities such as office, warehouse operations, and transportation. Increase the use of energy efficient technology and appliances in our business activities to conserve energy and reduce our carbon footprint.

Emission reduction: Reduce greenhouse gas emissions by identifying the source. Improve efficiency, minimize transportation, and look for alternative fuels for continuous improvement of emission levels.

Waste management: Minimize waste generation in our business activities. Follow the 3R principle 'Reduce/Reuse/Recycle' of waste management to increase the waste diversion rate from landfills. Only use recyclable or compostable packaging materials and promote recycling and composting.

Training and awareness: Train and inspire employees and customers to make positive impacts on the environment. Integrate environmental information to the product and circulate tips for sustainable living to our employees and customers.

Community participation and partnership: Establish a partnership with appropriate government organizations, non-government organizations and other businesses for achieving sustainability goals. Help and participate with local communities for sustainability efforts.
